

Peter Graf, PhD

Peter Graf is a Professor of Psychology at the University of British Columbia. He obtained his PhD in Psychology from McMaster University, his undergraduate degree from the University of Toronto, and postdoctoral training in Neuropsychology at the University of California in San Diego. His research focuses on attention, perception, learning and memory, on how these abilities function in normal adulthood, and on how they decline in old age and when the brain is affected by trauma or disease such as Alzheimer's. His research is funded by the Canadian Institutes of Health Research, Natural Science and Engineering Research Council of Canada, and by the British Columbia Medical Services Foundation.
